GLASSWALL

Safety and Integrity Through Trusted Files.

Glasswall is a file regeneration and analytics company and a leader in the field of Content Disarm and Reconstruction (CDR).

We regenerate a file to a safe standard of 'known good', enforcing the format's structural specification and eradicating high-risk active content.
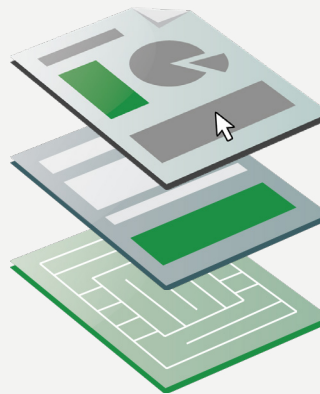

How Glasswall Works

Untrusted Original File

Deep File Inspection Reveals Functional and Structural Layers

Sanitise High-risk Macro, Javascript, Acroform and URLs

Remediate File Structure Deviations to Manufacturer Specification

Clean and Safe New File

Visual Content Unchanged

Malware Payloads and Phishing Links Removed

Elusive Malicious Code Disarmed

Rebuild for Email Overview

Email with Original Attachment → Untrusted File → Rebuild for Email (GLASSWALL) → Trusted File → Email with New Attachment

The Threat

66% of advanced malware launches by opening an attachment.
(Source: Verizon)

48% of SMBs said a major data breach would shut down their business permanently.
(Source: Appriver Cyberthreat Index Q1 2019)

69% of organisations say threats they face can't be stopped by anti-virus.
(Source: Cisco 2018 Cyber Security Report)

- Seamless and non-disruptive onboarding
- Pricing at £1 or $1.25 per user, per month
- Protection from advanced threats and ransomware

Glasswall Products
